Ielts writing task 1 samples band 9 process

The diagram below shows the process by which bricks are manufactured for the building industry. Summarise the information by selecting and reporting the main features, and make comparisons where relevant. Write at least 150 words. Model Answer: The process by which bricks are manufactured for the building industry can be outlined in seven consecutive steps. First the raw material, clay, which was just below the surface of soil in certain clay-rich areas has to be dug up by a digger. Then the lumps of clay are placed on a metal grid in order to break up the big chunks of clay into much smaller areas, which fall through the metal grid onto a roller, whose motion further segregates the bits of clay. Sand and water are added to make a homogenous mixture, which is then either formed in moulds or cut into brick-shaped pieces by means of a wire cutter. Those fresh bricks are then kept in a drying oven for at least 24 and a maximum of 48 hours, several dozen if not hundreds of bricks at a time. The dried bricks are then transferred to a so-called kiln, another type of high temperature oven. First they are kept at a moderate temperature of 200C - 1300C. This process is followed by cooling down the finished bricks for 48 to 72 hours in a cooling chamber. Once the bricks have cooled down and have become hard, they get packaged and delivered to their final destination, be it a building site or storage. Band 9 (217 words) Comment: "This response fully satisfies the requirements of the task. All key features of each stage of the process are appropriately and accurately presented. An excellent overview is given at the beginning of the response and this skilfully incorporates part of the rubric, changing the grammatical function, to give a brief summary of the whole process. The message is very easy to read with seamless cohesion that attracts no attention. Paragraphing, linking and referencing are all skilfully managed. The language used is very fluent and sophisticated. A wide range of vocabulary and structures are used with full flexibility and accuracy. Only rare minor 'slips' can be found and these do not detract from the high rating." This script is a good example of a Band 9 performance. by Liz This IELTS diagram model answer is estimated at band score 9. It is possible to have a diagram in your IELTS writing task 1 academic paper. A diagram is also known as a process. The diagram shown below is from IELTS Cambridge Book 8, Test 3. The diagram below shows the stages and equipment used in the cement-making process, and how cement is used to produce concrete for building purposes. Source: IELTS Cambridge English Test Book 8 Diagram Model Answer The diagrams illustrate the way in which cement is made and how it is then used in the process of making concrete. Overall, limestone and clay pass through four stages before being bagged ready for use as cement which then accounts for 15% of the four materials used to produce concrete. While the process of making cement uses a number of tools, the production of concrete requires only a concrete mixer. In the first stage of making cement, limestone and clay are crushed together to form a powder. This powder is then combined in a mixer before passing into a rotating heater which has constant heat applied at one end of the tube. The resulting mixture is ground in order to produce cement. The final product is afterwards put into bags ready to be used. Regarding the second diagram, concrete consists of mainly gravel, which is small stones, and this makes up 50% of the ingredients. The other materials used are sand (25%), cement (15%) and water (10%). These are all poured into a concrete mixer which continually rotates to combine the materials and ultimately produces concrete. Comments: This diagram gives a concise introduction. The overview contains key features of both diagrams and also highlights the connection between them. The body paragraphs are organised well and linking devices are used flexibly and accurately. Each body paragraphs explained the steps of each process in a logical order. Complex sentences are accurate and there is also passive voice used. Collocations are well used. Recommended Here is a band 9 IELTS task 2 sample answer for you about the process of silk production. In the IELTS Writing Task 1, you may get one of 7 questions. Bar Chart Line Graph Pie Chart Table Progressive Bar Chart Map Process Diagram You could also get a combination of these and be asked to compare them. Today we will look at a process diagram, featuring the life cycle of the silkworm and the production of silk cloth. Source: Cambridge English IELTS Practice Papers This question is interesting because it has two different stages and this will affect our answer structure and grammar. With this kind of question I would use the following structure: Paragraph 1 Sentence 1 - Paraphrase Question We simply take the question and use synonyms to paraphrase it. The examiner will be looking for your ability to do this in the exam. Paragraph 2 Sentence 1 - Overview of stage 1 Sentence 2 - Overview of stage 2 Write two general things about the diagram. You could include such things as how many stages there are, the outcomes, the beginning and the end, if it is a natural or man-made process or if the process is cyclical or linear. Paragraph 3 Sentence 1 - Details of stage 1 Sentence 2 - Details of stage 1 Sentence 3 - Details of stage 1 Take the general statement you made in paragraph 2 and support them with details from the diagram. Remember to only use the information you can see in the diagram. Do not draw conclusions or give your opinion. Repeat with the next paragraph. Paragraph 4 Sentence 1 - Details of stage 2 Sentence 2 - Details of stage 2 Sentence 3 - Details of stage 2 Grammar: The Passive When describing any of the chart questions you shouldn't use the passive, but when describing a process you may have to. However, the passive is only used to describe man-made processes. If you are given a natural process you should use the active, rather than the passive. Therefore, in this answer, I will use the active to describe the life cycle and use the passive to describe the manufacture of silk. Sample Answer The graphic illustrates the life process of the silkworm and the phases in the manufacture of silk material. Overall, the lifecycle is a natural process and contains four cyclical phases, beginning with the laying of eggs and ending with the birth of a new moth from a cocoon. The production of silk is, in contrast to the previous stage, a man-made linear process comprising of 6 main stages. To begin with, eggs are produced by the moth and it takes 10 days for the eggs to hatch into silkworm larvae that feed on mulberry leaves. This stage takes between 4 and 6 weeks before the worms construct a cocoon from silk thread, taking approximately one week. They stay there for around a fortnight, subsequently emerging as moths and the process can begin again. The first stage in the manufacture of silk is the selection of cocoons and these are then boiled. Once boiled, the silk thread is unwound to a length of between 300 and 900 meters. Finally, the silk can be twisted and weaved into cloth before being dyed. (180 words) This page illustrates an example of an IELTS process. Occasionally you will have to describe a process in the test instead of a graph. Although this type of diagram is less common to see in the test, it is still important to have an understanding of how to tackle this should it arise. This is an example of the process of making bricks. A sample answer is below the diagram. IELTS Writing Task 1 You should spend about 20 minutes on this task. The diagram illustrates the process that is used to manufacture bricks for the building industry. Summarize the information by selecting and reporting the main features and make comparisons where relevant. Write at least 150 words. The Brick Manufacturing Process IELTS Process Brick Manufacturing IELTS Process Model Answer The diagram explains the way in which bricks are made for the building industry. Overall, there are seven stages in the process, beginning with the digging up of clay and culminating in delivery. To begin, the clay used to make the bricks is dug up from the ground by a large digger. This clay is then placed onto a metal grid, which is used to break up the clay into smaller pieces. A roller assists in this process. Following this, sand and water are added to the clay, and this mixture is turned into bricks by either placing it into a mould or using a wire cutter. Next, these bricks are placed in an oven to dry for 24 - 48 hours. In the subsequent stage, the bricks go through a heating and cooling process. They are heated in a kiln at a moderate and then a high temperature (ranging from 200c to 1300c), followed by a cooling process in a chamber for 2 - 3 days. Finally, the bricks are packed and delivered to their destinations. Words 173 Comments This is a good answer as it covers the requirements of the task. The topic of the IELTS process diagram is first introduced and then an overview is given. You should give an overview for all academic task 1 responses, not just graphs. In this case, here is the overview: Overall, there are seven stages in the process, beginning with the digging up of clay and culminating in delivery. The answer is well-structured, covering each stage of the process in turn. It uses the passive voice which is needed when you describe a process diagram in IELTS but you are not referring to who is doing the action. Here are some examples of the passive used: clay is then placed which is used to sand and water are added bricks are placed They are heated Home > Sample Graphs > IELTS Process Band 7+ eBooks *I think these eBooks are FANTASTIC!!! I know that's not academic language, but it's the truth!" Linda, from Italy, Scored Band 7.5 View the eBooks Sign up for Free IELTS Tips! Enjoy this page? Please pay it forward. Here's how...
